Priyanka More

Senior Software Engineer | Backend, Platform and Data Engineering
Bangkok, Thailand | LinkedIn | more.piyapatil@gmail.com | 0615797994
Portfolio Website: https://priyankapatilmore.github.io/portfolio

---

Senior Software Engineer with 8+ years of experience architecting high-availability distributed systems, microservices. Deeply specialized in Java (Spring Boot) and Apache Kafka, with strong adaptability across C# (.NET Core), Go (Golang), and Scala for high-concurrency workloads. Experienced in automating multi-cloud infrastructure across AWS and Azure using Kubernetes, Terraform, and GitOps, with strong expertise in CI/CD, observability and security controls.

SKILLS

Languages:	Java 17/21+, Spring Boot, Kotlin, .NET Core, Go, Scala.
Data & Messaging:	Apache Kafka, Apache Spark, Azure Event Hubs, PostgreSQL, MS SQL Server, MongoDB, ETL Pipelines, Dimensional Modeling.
Cloud & CI/CD:	Kubernetes (AKS), AWS, Azure, GCP, Docker, Terraform, CI/CD (GitHub Actions, ArgoCD, Jenkins), GitOps.
Reliability:	Datadog (Metrics, Alarms), Prometheus, Grafana, Root Cause Analysis.

EXPERIENCE

ExxonMobil **Dec 2022 - Present**
Sr. Platform Engineer & Full Stack Developer (Backend/Data Pipeline) Bangkok, Thailand

- Defined the target architecture and migration strategy to decouple legacy monoliths into scalable Java (Spring Boot), Go (Gin), and .NET Core microservices, establishing standardized design patterns that improved P95 latency across core services.
- Design and maintain high-throughput event-driven data pipelines using Apache Kafka and Azure Event Hubs, processing 250M+ transactions daily. Implement dead-letter queues and retry policies to improve fault tolerance and data consistency.
- Establish comprehensive production observability using Datadog (metrics, alarms, structured logging), lead root cause analysis and remediation efforts, significantly reducing bug turnaround time and lowering the overall change failure rate.
- Engineer highly available Kubernetes (AKS) delivery pipelines via GitHub Actions and ArgoCD, integrating automated security tools (SonarQube SAST, dependency scanning, secrets detection) to improve deployment velocity and merge lead times.
- Standardize multi-cloud infrastructure across Azure and Alibaba Cloud using reusable Terraform modules, ensuring infrastructure-as-code consistency between dev and production environments.
- Drive team reliability initiatives by navigating dependencies across squads, mentoring 4 engineers through rigorous system design reviews, and establishing a 75% unit test coverage baseline to elevate overall architectural standards.

Demeter ICT Company Limited. **Aug 2019 - Nov 2022**
Senior Application Developer Bangkok, Thailand

- Designed and developed scalable backend services and RESTful APIs from scratch using Java (Spring Boot) and Node.js.
- Developed comprehensive Python automation scripts for data extraction, complex operational workflows, and automated end-to-end API testing.
- Executed deep database testing and SQL validation across GCP and AWS cloud environments, ensuring strict data integrity during high-volume CRM (Zendesk) integrations.
- Conducted load and stress testing on Interactive Voice Response (IVR) systems and Dialogflow chatbots, identifying performance bottlenecks to ensure real-time responsiveness under high request volumes.

BaanBanchi Co., Ltd. **Sep 2018 - Jul 2019**
Full Stack Engineer Bangkok, Thailand

- Developed an accounting and payroll application for employee tax calculations and financial records.
- Designed relational database schemas, tables, and stored procedures in MS SQL Server.
- Built user interfaces with WPF, HTML, and Bootstrap, connecting them to backend .NET services.

ADDITIONAL PROJECTS

Open Source Project **Feb 2025 - Present**
AI & Platform Engineering Bangkok, Thailand

- Built a privacy-focused RAG system using Python, Ollama, and ChromaDB for secure semantic search, integrating MCP for document retrieval and relevance-based re-ranking.
- Implemented role-based access controls for sensitive documents and containerized AI services using Docker, following secure deployment practices.

Seanet Singapore **Feb 2022 - Jun 2022**
Software & Data Engineer Freelance Singapore

- Architected robust ETL data pipelines and batch processing workflows utilizing Apache Spark and Scala to efficiently process, transform, and aggregate complex datasets for reporting.
- Authored complex SQL transformations utilizing CTEs, window functions, and stored procedures in MS SQL Server for rapid data cleansing, dimensional modeling, and high-volume reconciliation.
- Modernized legacy codebases by designing lightweight microservices and REST APIs using Java and Kotlin, ensuring clean separation of concerns and high maintainability.

EDUCATION

Asian Institute of Technology **Jan 2017 - Dec 2018**
Master of Engineering: Major in Computer Science Pathum Thani, Thailand

- Research Grade: Excellent (A)

Jawaharlal Nehru Technological University Hyderabad **Sep 2013 - Dec 2016**
Bachelor of Technology: Major in Computer Science Hyderabad, Telangana, India
